

CREATE
WALLCOVERING

 **AQUA-CLEAR**
Water-Based Topcoat

Aqua-Clear Top Coat 3.0

In 1994, the mill that makes Create Wallcovering, developed a proprietary formulation from a blend of urethane, acrylic, and vinyl polymers used to seal the surface of its wallcovering.

The resultant product is Aqua-Clear - a water-based, Teflon-free top coat with exceptional resistance to abrasion and staining.

Recently, the formula has been modified to reflect the growing demand for an ultra-low emitting, water-based protective top coat with the following enhanced characteristics:

- ▶ Improved abrasion resistance
- ▶ Scrubability with sanctioned commercial cleaners (including bleach when diluted in water)
- ▶ Non-yellowing surface
